**Branding Guidelines**

Updated: June 12, 2020

**TAG & eBacon Brand Identity + Design System**

Roles: Design & Art Direction

### **Problem:**

Between two brands, TAG Employer Services & eBacon — both serviced under the same company, there was a lot of complexity between the two visual brand identities.

### **Challenge:**

TAG needed a way to be able to market and develop both of these products quickly and effectively while maintaining brand consistency throughout the whole customer experience.

### **My role:**

I revised, refreshed, and consolidated the two brands' visual assets into a single design system to help make scaling these two products more manageable.

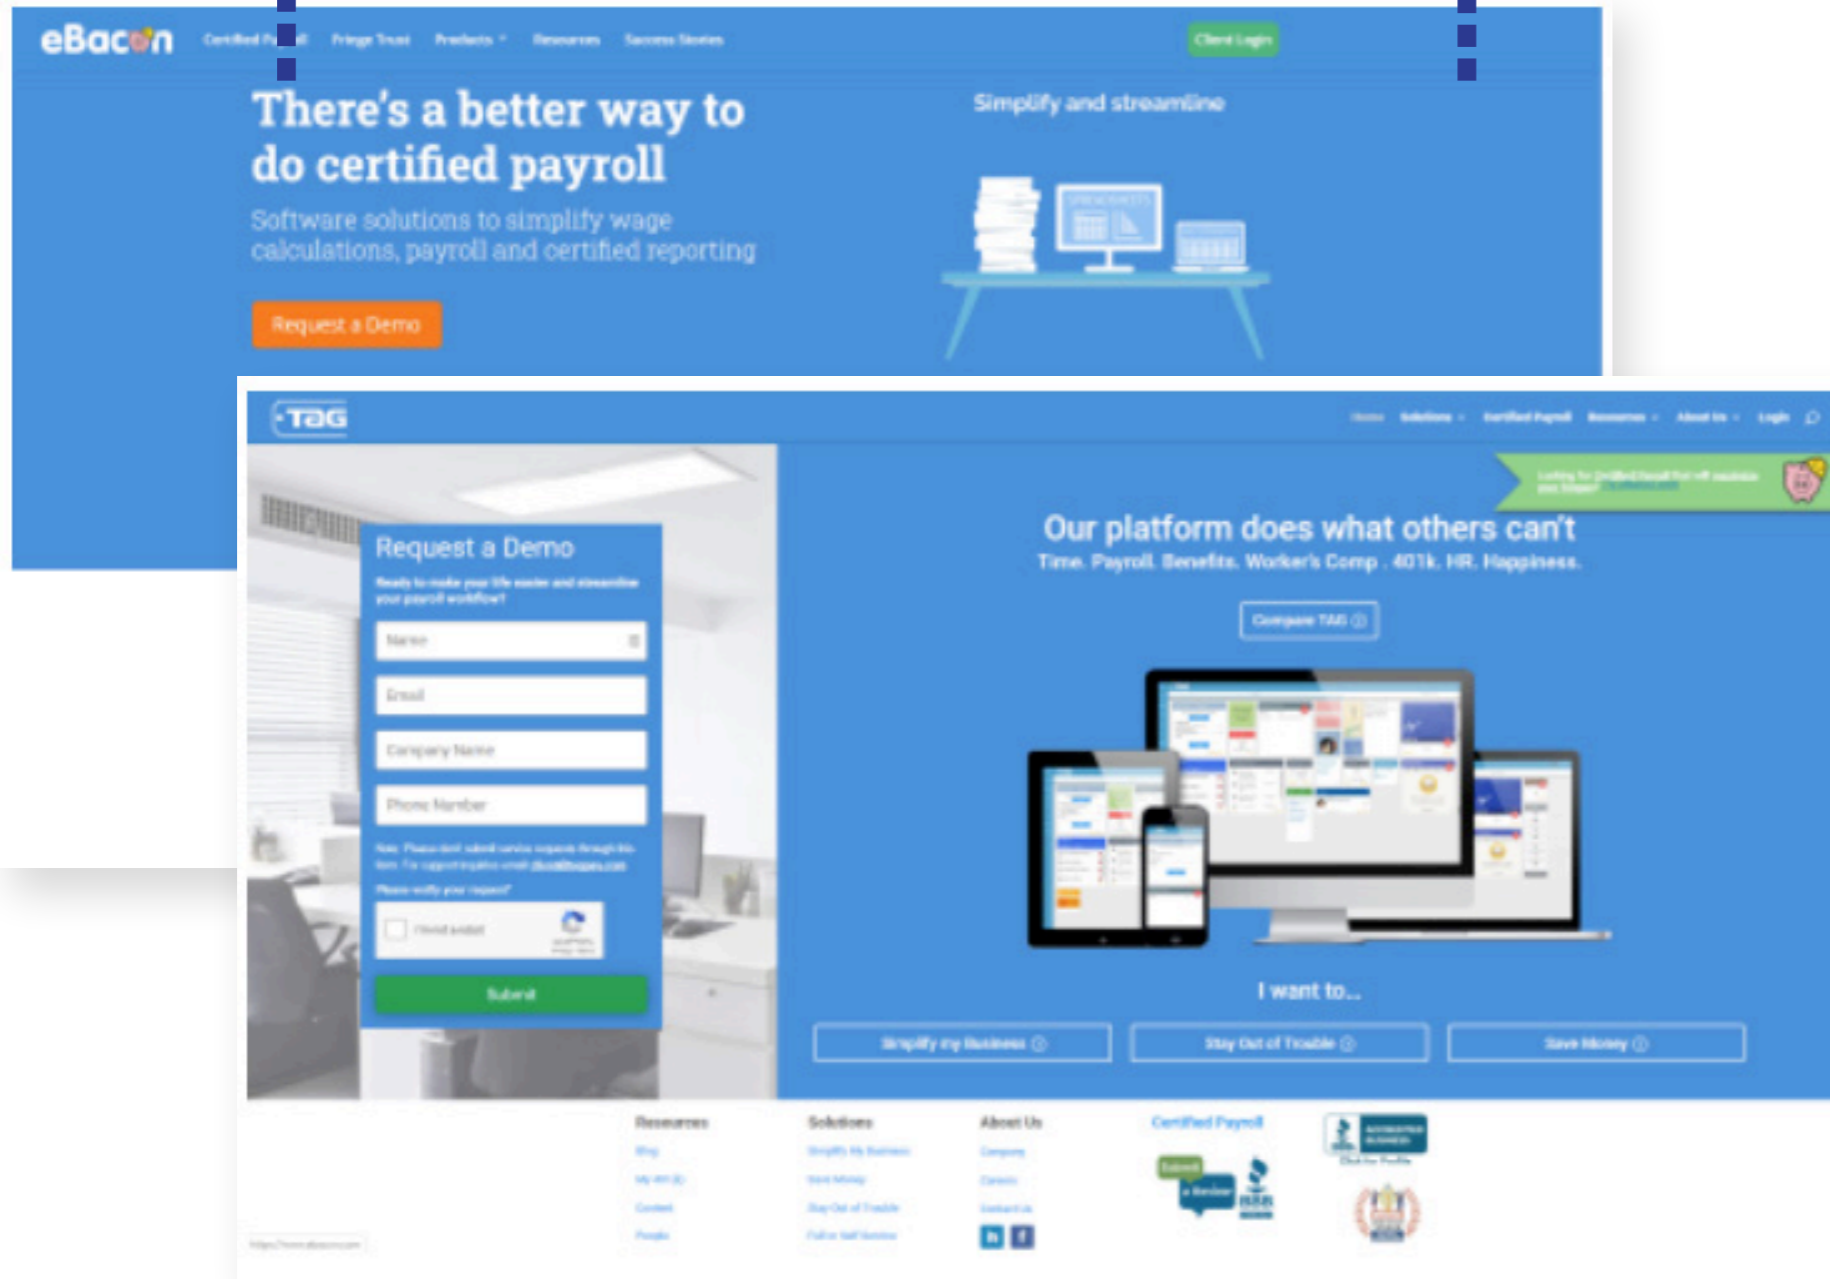

## **Reviewed Current Brand Assets**

Determined what was working & what was adding unnecessary complexity

## NOT WORKING

Roboto Slab is hard to read for many headers

Blue appears fine on web, but does not print accurately

## WORKING

Open Sans is much more legible and available on a wider range of browsers and devices

This blue contrasts better with white type on screens and can be matched much easier for printable docs

## **Defined Logo Standards**

Created rules for logo usage for the two brands

# Logos

## eBacon & TAG

### eBacon

The eBacon logo only appears in two colors: black and white. The black logo should only appear on a white or very light color background, while the white logo should only appear on the primary blue background or black.

Only the pig should appear in square formatted spaces with limited space (such as social media profile pics).

### TAG

On white backgrounds, the TAG logo should be the primary blue color, while the white logo, similar to eBacon, should only appear on the primary blue background or black.

On white background:

Social:

White KO logos should only appear on primary color background:

## **Established Primary Color Guideline**

Documented color codes for different primary color uses

## **Implementation**

Before I left TAG, the development team created a Storybook component library based off of the brand guidelines and design system I created

## **Implementation**

I also used this design system when I redesigned the TAG and eBacon marketing websites

## 401k Distributions

Roles: UX Research & UI Design

## 401k Distributions

### **Problem:**

Users enrolled through TAG's 401k system needed to manually fill out PDF forms in order to transfer funds from their account. This system took up an enormous amount of time for our 401k department.

### **Challenge:**

There were various forms for different types of withdrawals or transfers.

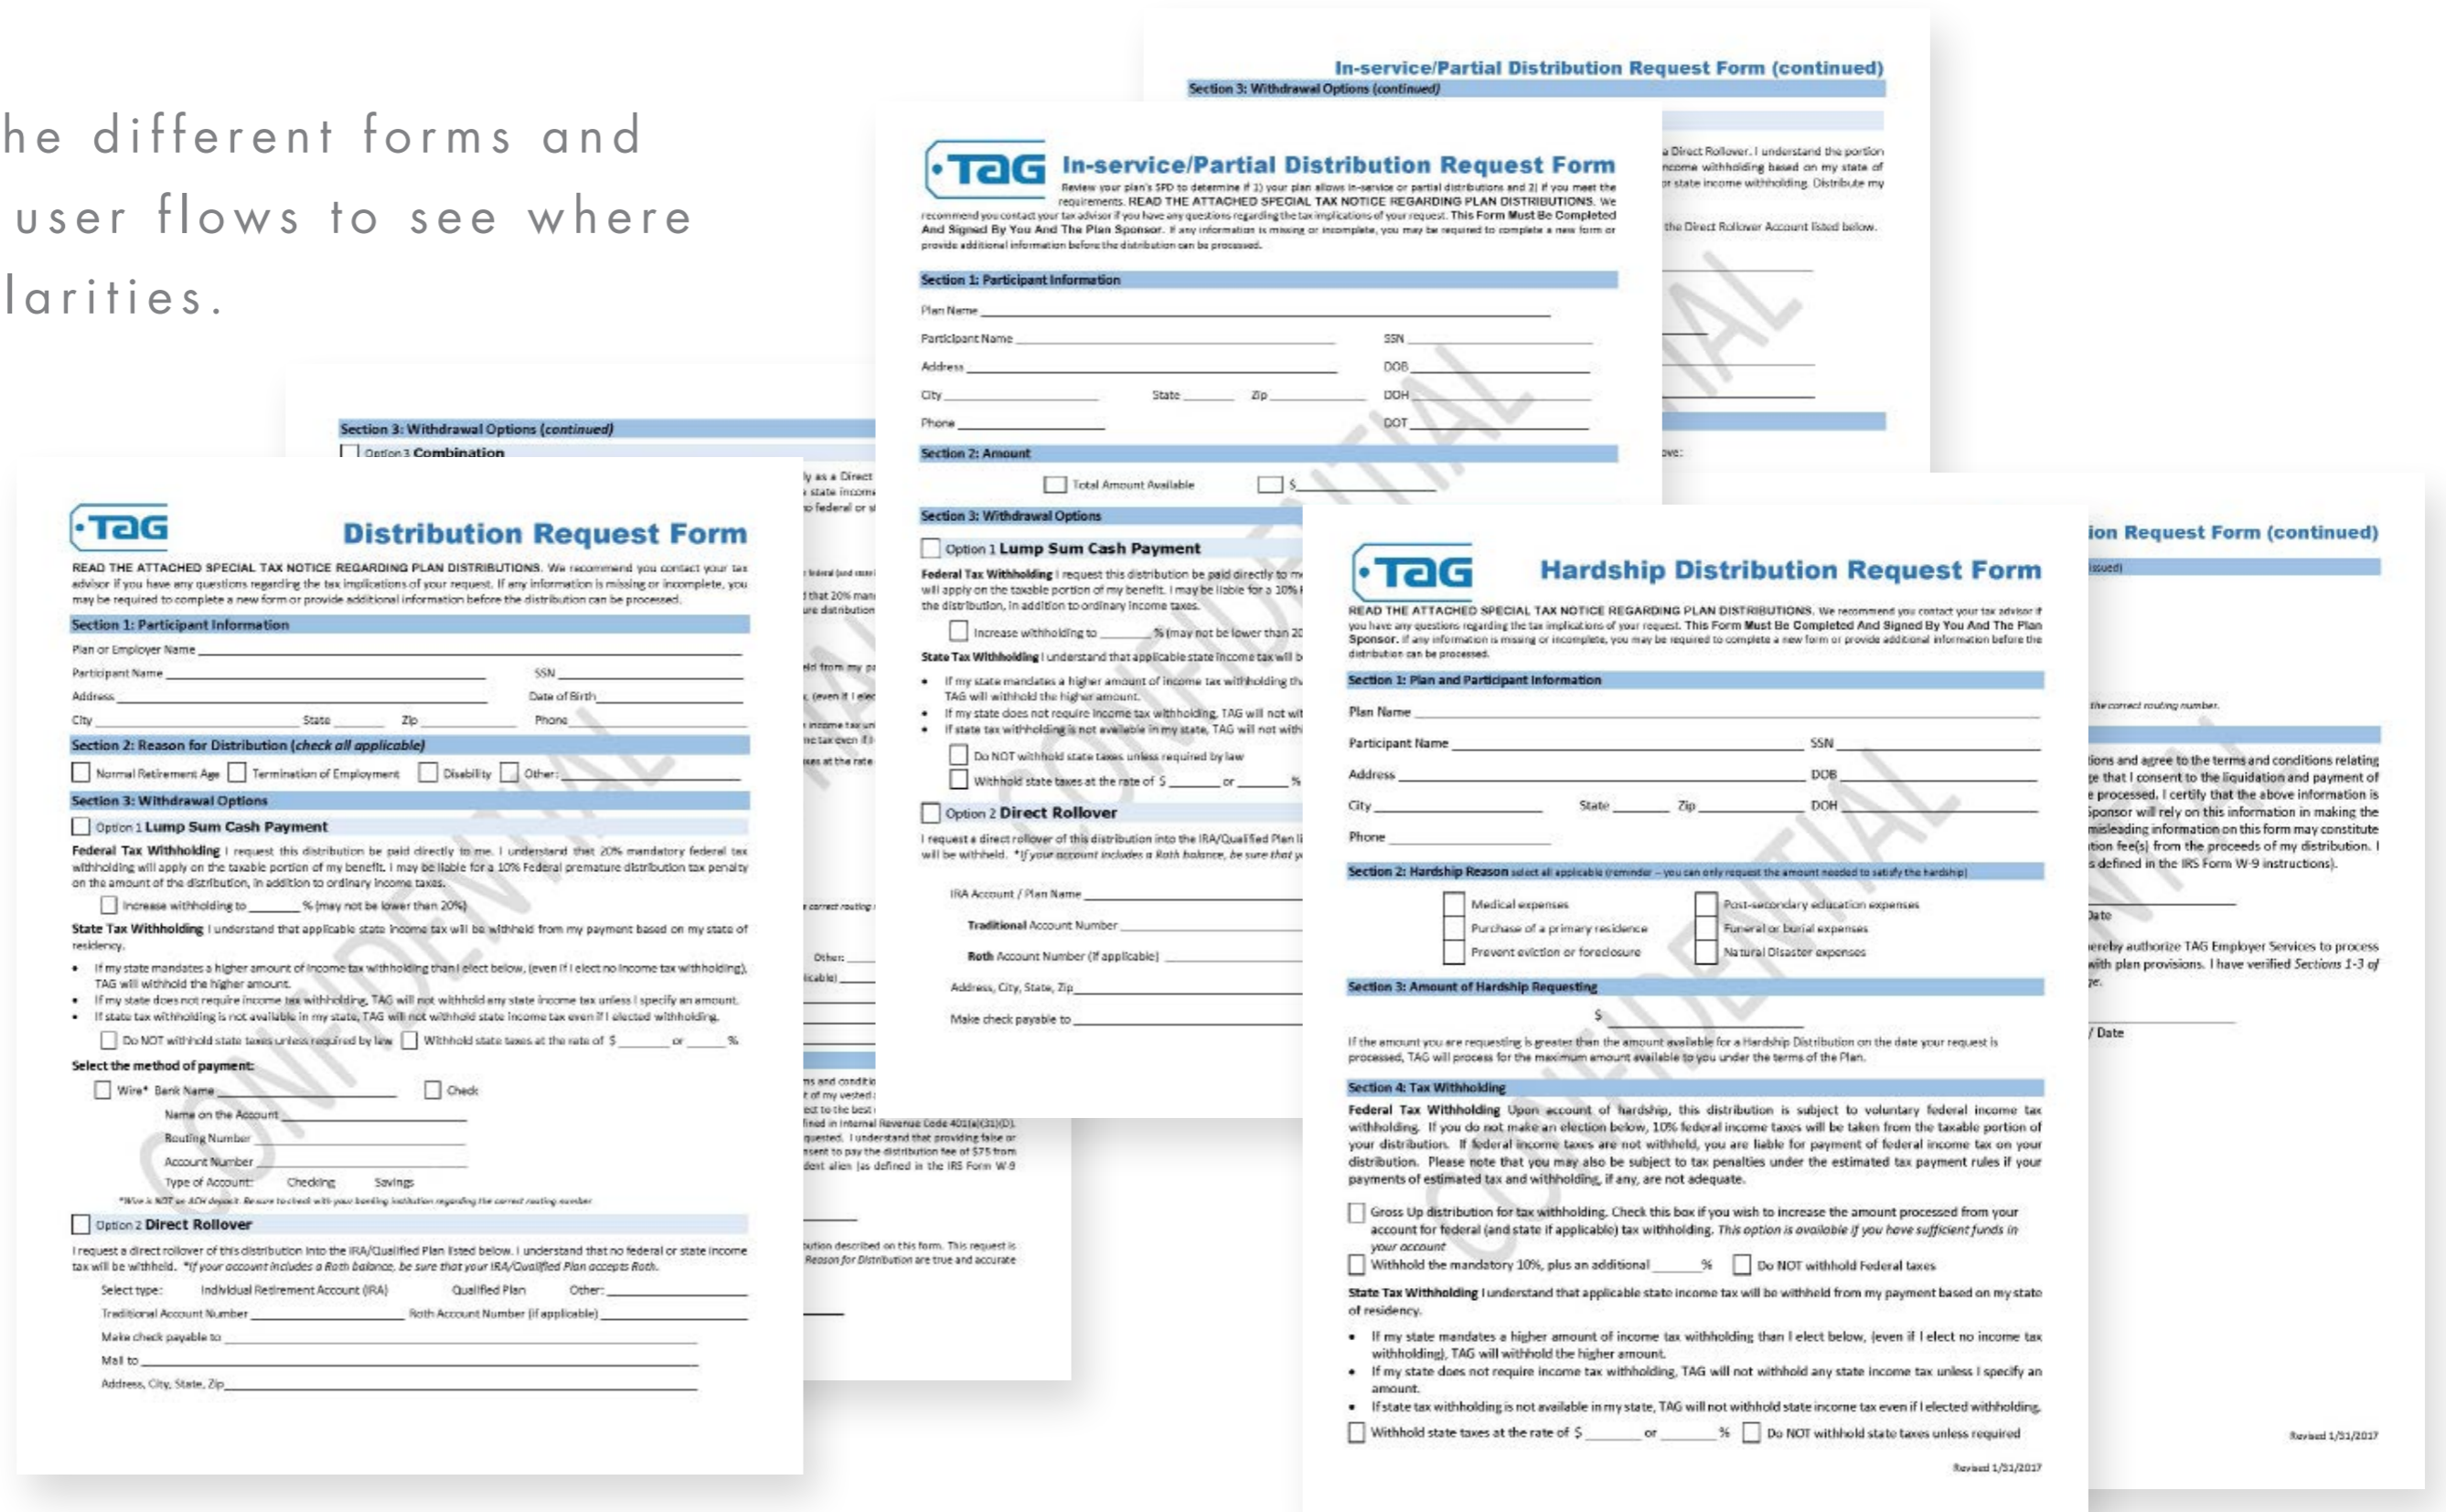

### **My role:**

I created the workflow and user interfaces based on meetings with the 401k team.

# Where I started

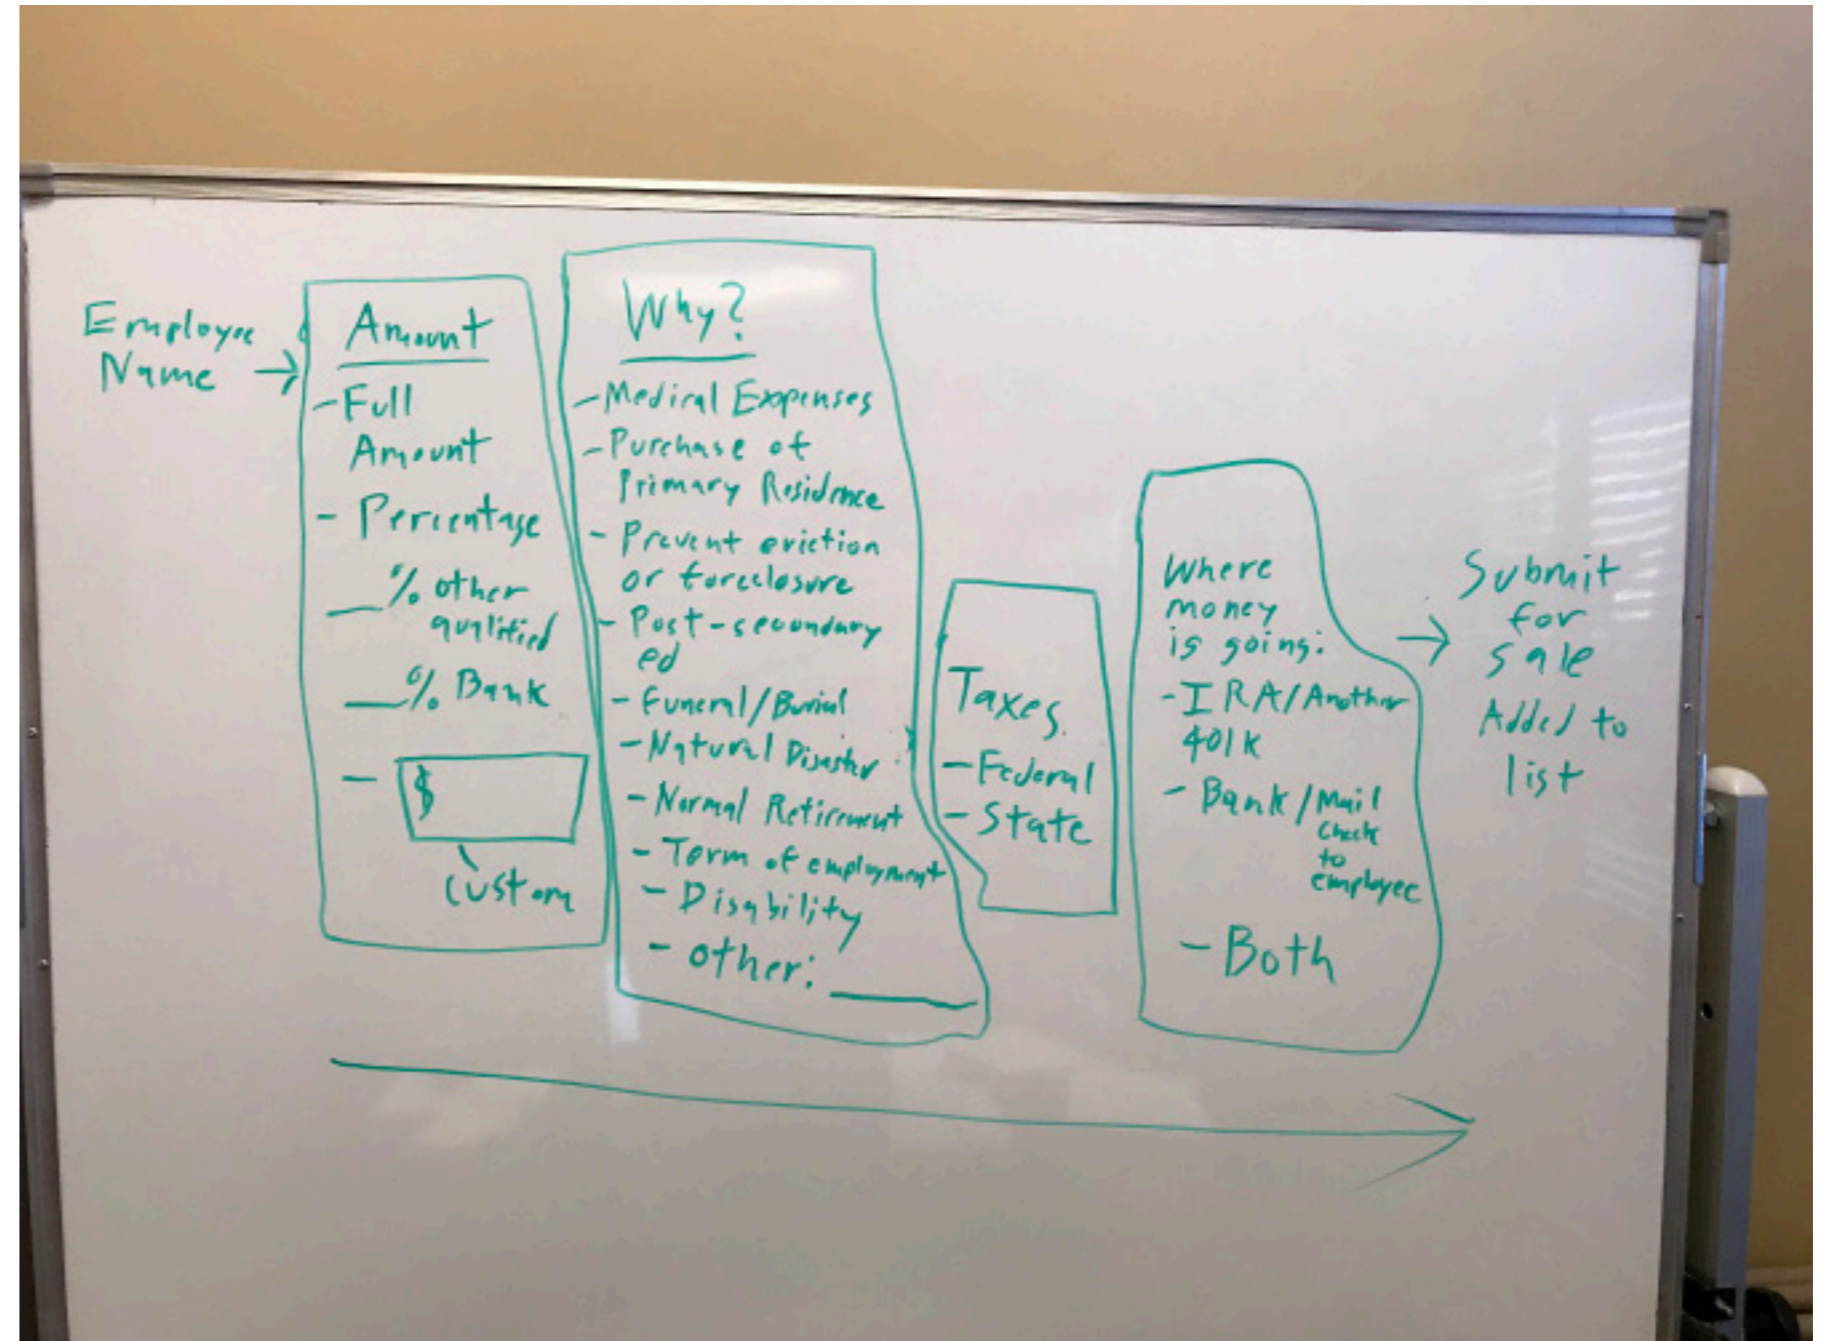

I dug through all the different forms and drew out different user flows to see where the forms had similarities.

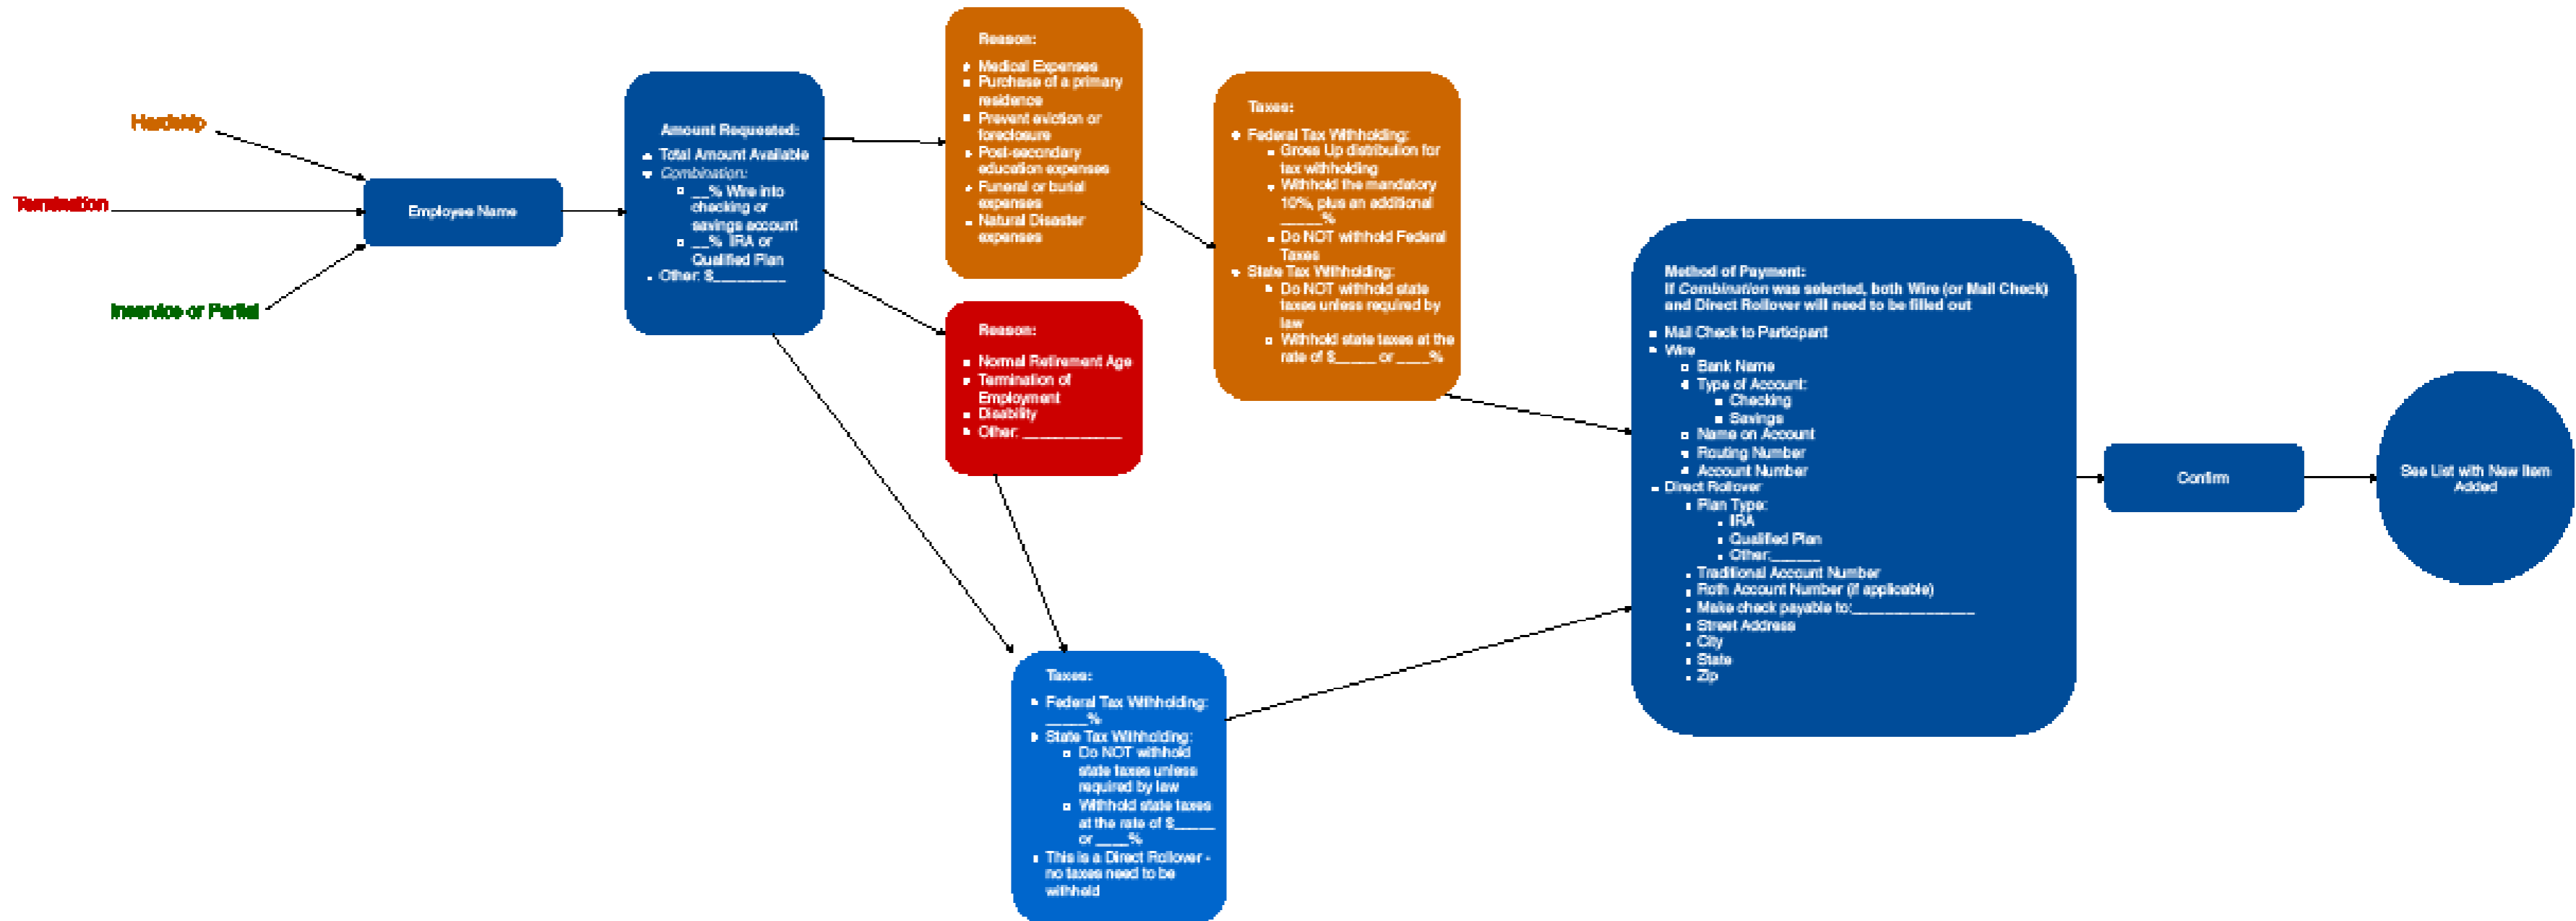

## Breaking down the complexity

The different requests for withdrawals/transfers broke down to:

1. Amount being requested
2. Why the funds were being requested
3. How users wanted to pay taxes for withdrawals (transfers exempt)
4. Where the money is going

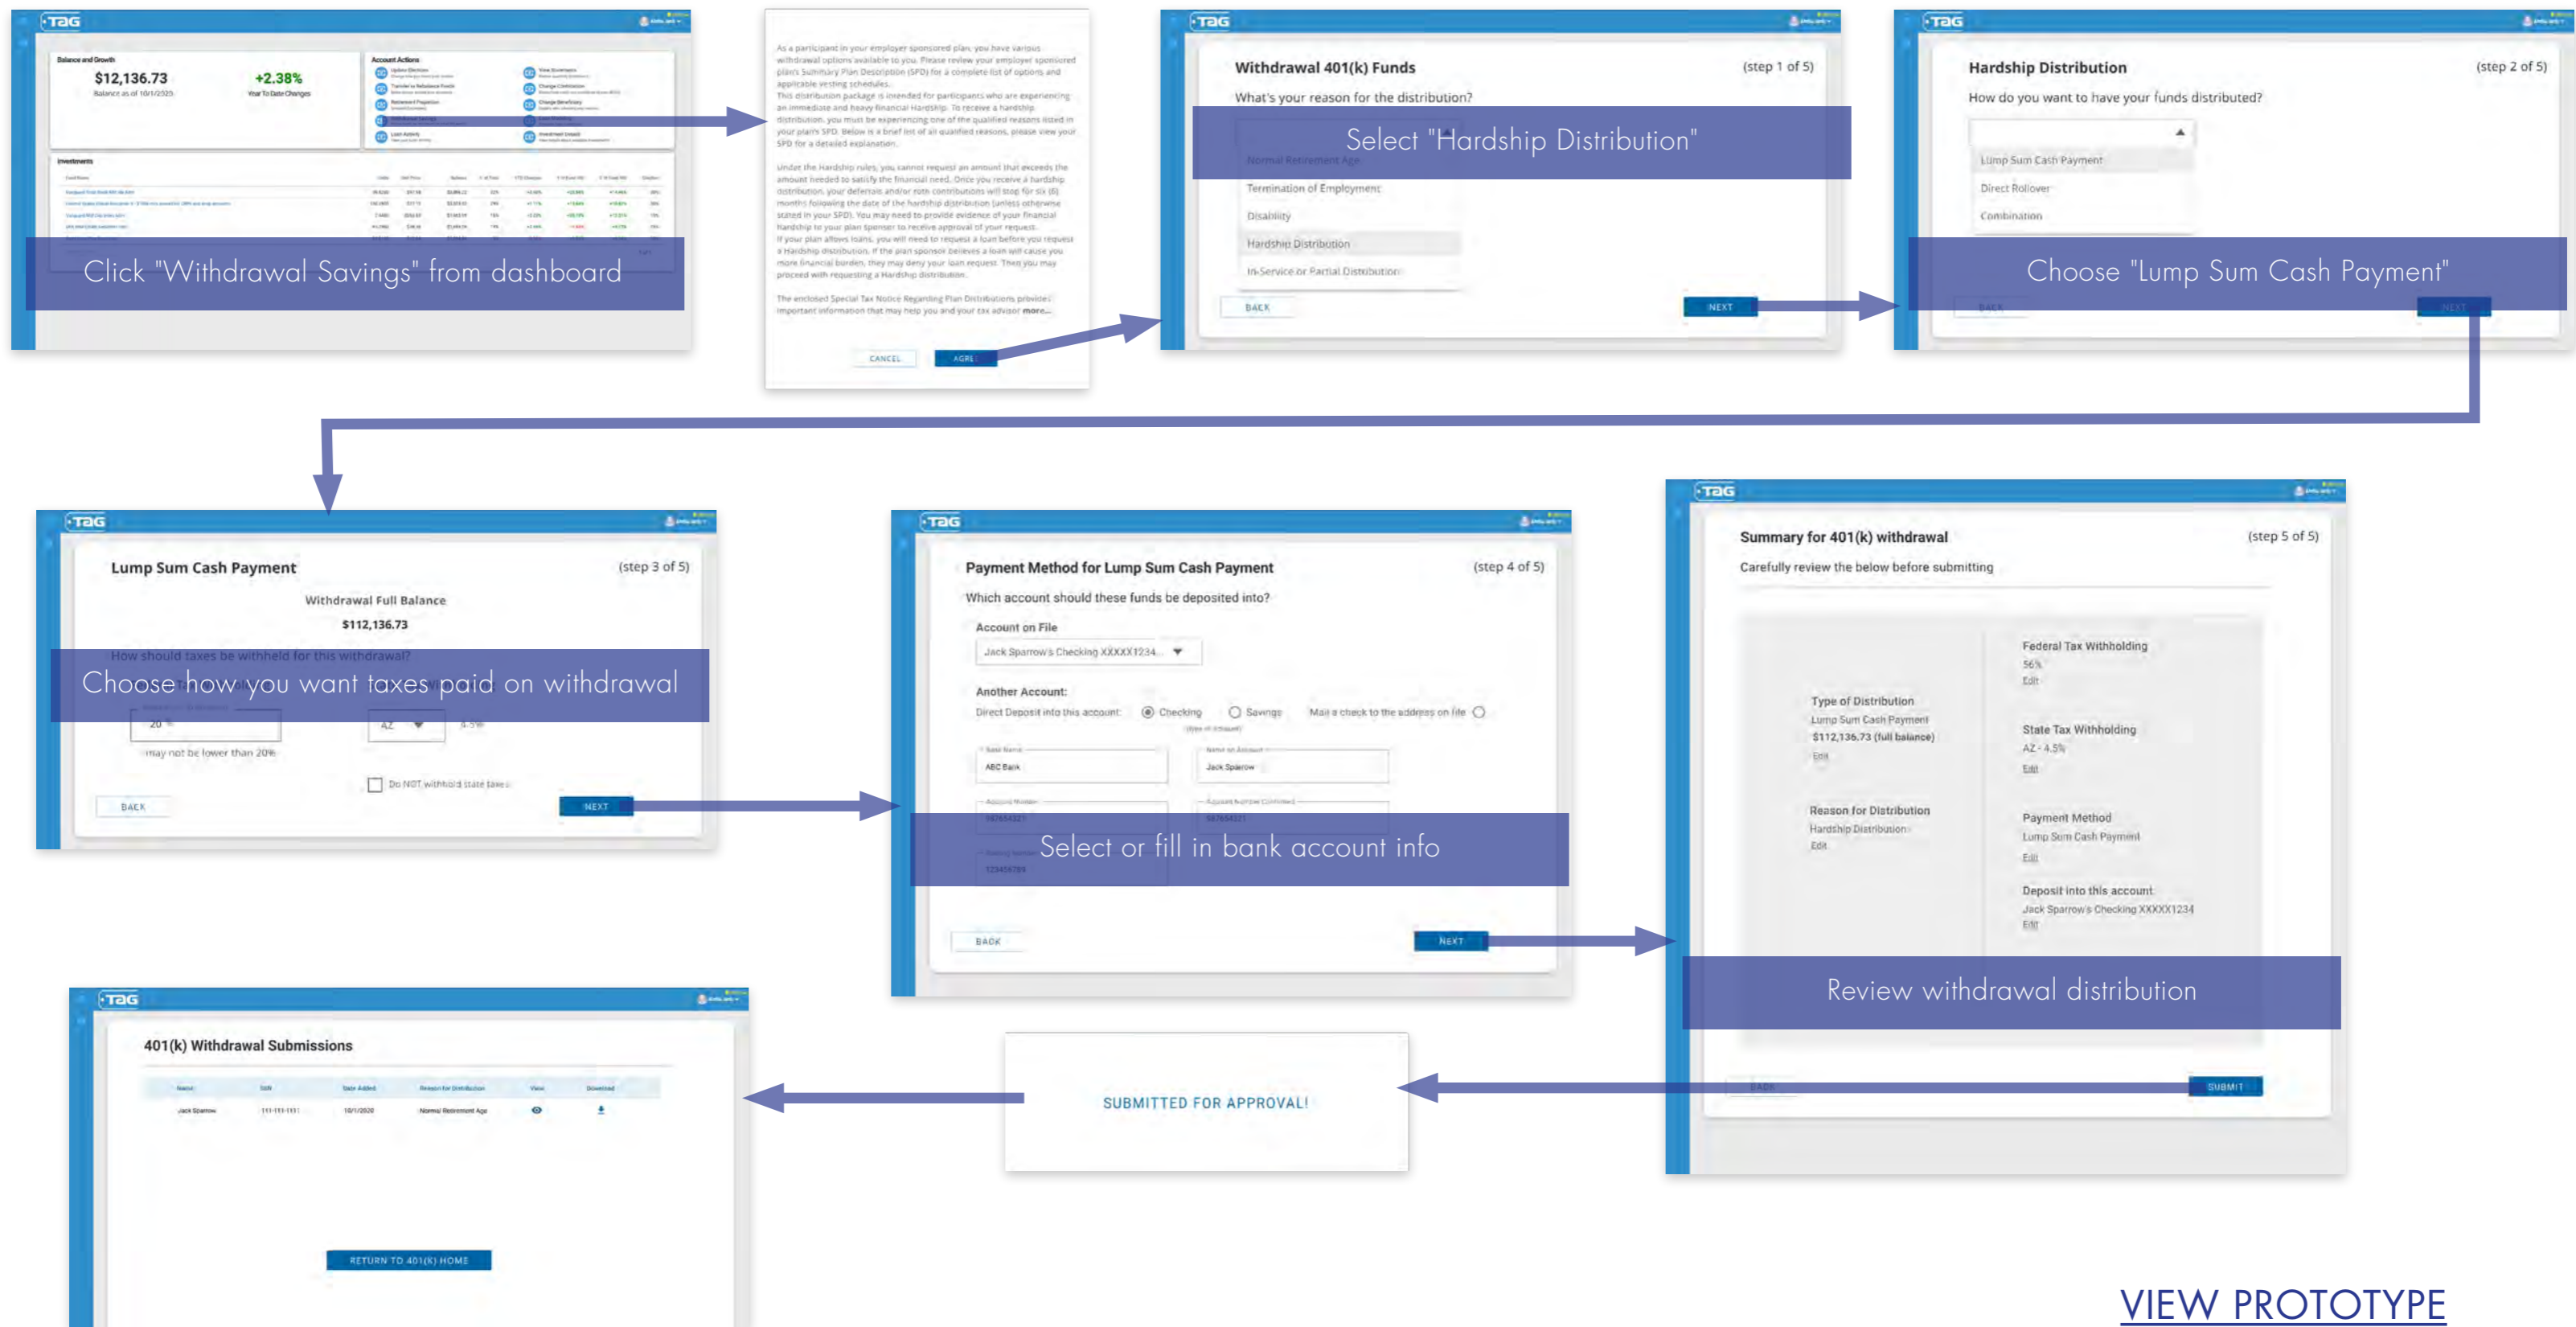

## Next steps...

I went through the different user flows with the development and 401k team, revised based on their feedback, then began designing the user interfaces for the different user flows.

The user flows outlined above account for: Normal Retirement Age, Termination of Employment, Disability, Hardship Distribution, and In-Service or Partial Distributions.

User flow example for a **lump sum cash payment** for a **hardship distribution** that would be **directly deposited into a checking account**.

## **Where this project was left off...**

Before I left TAG, the development team was able to launch the transfer/withdrawal capability for our internal 401k team to use. This feature was scheduled to be accessible to our external customers in December 2020.
